IDENTIFIERS	Association of Research Libraries

ABSTRACT

This inventory provides profiles, tables, and listings of automated library activities at 115 Association of Research Libraries (ARL) institutions. The library profile covers 18 functions: (1) acquisitions; (2) serials check/claim; (3) serials/union list; (4) authority control; (5) cataloging/utility; (6) cataloging/local; (7) circulation; (8) reserve room; (9) COM (computer output microform) catalog; (10) online catalog; (11) database searching; (12) collection development; (13) interlibrary loan; (14) telefacsimile; (15) public computing; (16) administrative; (17) database conversion; and (18) reference. In addition to individual library profiles, selected information is formatted into listings and tables of counts, including the number of libraries reporting automation status according to function; the number of libraries reporting public access for circulation, database searching, and online catalog; number of libraries reporting extent of system for circulation, database searching, and online cataloging; number of libraries reporting shared or dedicated computers for acquisitions, circulation, and online catalog; 1985 and 1986 tables showing number and percentage of libraries reporting automation status; and 1985 and 1986 tables showing the number and percentage of libraries reporting integrated status. The complete database of automation information is maintained by the Office of Management Studies, ARL, and is available for searching throughout the year. (CGD)

AUTOMATED INHOUSE SYSTEMS LISTING

INTRODUCTION

THIS THIRD ANNUAL **Automation Inventory of Research Libraries** provides profiles, tables, and listings of automated library activities at 115 ARL institutions.* As in past years, this publication is designed to be helpful to a diverse readership, from administrators needing an overview of automation trends, to committees involved in planning and modifying systems, to systems librarians searching for specific examples of automation applications.

In addition to individual library profiles, this **Inventory** includes selected information formatted into listings and tables of counts. These listings and tables have been developed to respond to the most frequently-asked questions concerning research library automation.

Since automated systems can be radically different, each library's profile -- or picture -- is based on its own automation configuration. The **Inventory** does not try to fit a library's automation into an overall scheme for comparison and contrast. Information comes from each library's Automation Contact -- usually a member of the systems staff who is familiar with the current and upcoming automation activities at the institution. For this year's **Inventory**, Automation Contacts updated their libraries' worksheets (based on last year's **Inventory**) during May and June 1987. Verification of responses took place from July to late September 1987.

The complete database of automation information is maintained by the Office of Management Studies, Association of Research Libraries, and is available for searching throughout the year. Recognizing that library technology is ever-changing, ARL members are encouraged to report changes as they occur, so that the database remains up to date.

---

*Not Included are non-university members Boston Public Library, the Canada Institute for Scientific & Technical Information, and the Library of Congress.

WHAT'S INCLUDED IN THE INVENTORY

FUNCTIONS

The inventory describes automation that is an administrative responsibility of the library or included in the library's budget.

Functions include commonly-performed library activities that are either directly supported by specific automated modules/systems (e.g., acquisitions), or that are indirectly supported by the library's choice to devote automated support to the function (e.g., reference, collection development).

When a function is open to interpretation as to an exact definition (e.g., "Reference,"), each library uses its own interpretation in responding to the inventory -- the interpretation that best describes how the library is using its automated resources.

Eighteen functions are explored in the 1987 inventory:

- Acquisitions
- Serials Check/Claim
- Serials/Union List
- Authority Control
- Cataloging/Utility
- Cataloging/Local
- Circulation
- Reserve Room
- COM Catalog
- Online Catalog
- Database Searching
- Collection Development
- Interlibrary Loan
- Telefacsimile
- Public Computing
- Administrative
- Database Conversion
- Reference

WHAT'S INCLUDED IN THE INVENTORY

DESCRIPTIVE FACTORS

To provide a profile of the extent and nature of automation, libraries describe each of the functions, where applicable, according to the following factors:

OPERATING STATUS
- PLANNING, PURCHASING, TESTING, IMPLEMENTING
- OPERATING
- MODIFYING, UPGRADING

EXTENT OF SYSTEM
- LIBRARY (in main library only)
- BRANCHES (library and branches)
- CAMPUS-WIDE (includes above)
- MULTI-INSTITUTION (includes above)

COMPUTER OWNERSHIP/USE
- DEDICATED COMPUTER
- SHARED COMPUTER

PUBLIC ACCESS (Where Applicable -- Not all functions apply.)
- ON-SITE IN LIBRARIES ONLY (main and/or branches)
- DIAL-UP ACCESS (includes above)
- LOCAL AREA NETWORK ACCESS (includes above)

NUMBER OF WORKSTATIONS normally used for the function or otherwise supporting that function. This number attempts to reflect the extent of automated support for each function, by counting workstations used for that function. Since many multi-use workstations will be reported for more than one function, the numbers for each library cannot be totalled.

NAME OF VENDOR or NETWORK/UTILITY Suggested acronyms can be found in the Automated Systems Listing. Respondents also added names of locally-developed systems, usually with explanations in the COMMENTS section.

COMMENTS Additional information that respondents judge useful for other academic and research libraries using this database. Respondents were encouraged to provide information on additional automated functions not included in the worksheet, or comments regarding exceptions to or explanations of their responses.

AUTOMATED INHOUSE SYSTEMS LISTING
A GUIDE FOR STANDARDIZED REFERENCES TO INHOUSE SYSTEMS

There are more than 30 commercially-supported options for both multi-function integrated and single-function systems. These options are available for a range of functions including circulation, acquisitions, serials control, and online public access catalogs. The following list includes commercially available systems likely to be implemented in ARL libraries.

ADLIB	Advanced Library Concepts
ALIS II	Data Phase
ALIS III	(Data Phase) Marketed by UTLAS
ATLAS	Data Research Associates
BACS	Bibliographic Access & Control Systems, Washington University
BLIS	Biblio-techniques Library and Information System (1986)
BOOKLINE	Blackwell automated acquisitions
CARL	Colorado Alliance of Research Libraries System
Checkmate	CLASS automated serials control system
CLSI	CL Systems Inc.
DOBIS	(IBM)
DYNIX	Dynix Integrated Library System
EBSCO	Serial Control System (for online serials check-in)
GEAC	GEAC Library Information System
ILS	Georgetown Univ. Medical Center Library Information System
INNOVACQ	Innovative Interfaces
LIAS	Pennsylvania State System
LIBS 100	CL Systems Inc.
LINX	Faxon
LS/2000	OCLC local library automation
NOTIS	Northwestern Online Total Integrated System
OCLC	Serial Control subsystem
PALS	Automated Library System marketed by Sperry)
PERLINE	Blackwell automated serials control
PHILSOM	Serials control
SAILS	Swets North America, Inc. multi-function system
SC-10	Faxon online serials check-in facility
STACS	Battelle's serials control system
TOMUS	Carlyle Systems
ULISYS	Universal Library System
URICA	McDonnell Douglas
VTLS	Virginia Tech Library System
WLN	Washington/Western Library Network inhouse software

LIBRARY COMMENTS

COMMENTS PROVIDED BY LIBRARIES

09 CALIFORNIA, BERKELEY, UNIVERSITY OF Operating Acquisitions System is based on microfiche and batch computing. We will switch to INNOVACQ for acquisitions and Serials control in fiscal year 1987/88. The 65 MELVYL terminals that provide access to the 9 UC Campus Library Union serials list also provide access to UC's Union Catalog of monographs.

10 CALIFORNIA, DAVIS, UNIVERSITY OF 250 represents a like total number of workstations/terminals that might be employed with an integrated processing system. Accessible on-line from terminals; also via dial-in ports. Used mainly for end-user training.

12 CALIFORNIA, LOS ANGELES, UNIVERSITY OF ORION, the UCLA library's locally developed online information system, runs on the Office of Academic Computing IBM 3090 under MVS-XA and TSO. ORION currently includes Acquisitions, fund accounting, serials processing, bindery, catalog maintenance and linked authority control modules in an integrated system with public access. Although ORION is mainframe-based, PC applications have been developed to capture and transfer data from external sources without staff rekeying. In June 1987 the database included just over 2.0 million bibliographic and 2.3 million authority records. A circulation/inventory control module, fully integrated with other ORION modules, will be tested in early 1987/88. (CLSI is currently used for circulation in the University Research and Biomedical Libraries.) In addition to 38 ORION public access terminals, 40 terminals provide user access to the MELVYL database, of the University of California's online union catalog. (The number of online catalog workstations reported also includes 19 ORION terminals at reference desks.) Cataloging is done via OCLC with archive tapes loaded weekly into ORION. Catalog editing and maintenance is done on ORION which includes a linked authority control system. ORION is used in all UCLA campus libraries. Local Extent is for Library and branches. Local off-campus institutions such as the University of California, Irvine Library and the Getty Center Library have established search-only dial-access accounts. The 82 Administrative workstations include 25 dedicated to systems development work (ORION and administrative applications) and 57 PCs located in all campus libraries.

14 CALIFORNIA, SAN DIEGO, UNIVERSITY OF The library is planning to choose a system to replace BLIS next year. A library wide ETHERNET is being installed to network PCs.

17 CHICAGO, UNIVERSITY OF LDMS = University of Chicago Library Data Management System.

18 CINCINNATI, UNIVERSITY OF All systems accessible from the same workstations. Total number of workstations is 120 hardwired to campus network and 48 dial access ports on campus 7171 protocol converter.

21 COLUMBIA UNIVERSITY While we show 70 workstations for administrative use, they are also used to support a variety of other functions in public service units.

27 EMORY UNIVERSITY DOBIS system running on campus mainframe (shared). CD ROM's each with 1 station in general library for end users 1) ERIC, 2) DATATEXT, 3) PSYCHLIT. Law has terminals for end user searching or public use; MED10. Preservation office has system for recording diagnosis and queuing work which will be integrated with NOTIS. Acquisitions operating in Medical Library; others to be added over next 12-18 months. Circulation: G.L. operating, others to be added over next year. Multi-purpose workstations with large numbers scattered through staff departments.

28 FLORIDA, UNIVERSITY OF The library also maintains and provides access to a large collection of machine readable data. A pilot project is underway to maintain an online database of selected U.S. Census data which will be accessible through the University wide area network.

31 GEORGIA, UNIVERSITY OF Inhouse integrated system - MARVEL Management of Resources for University Libraries. Public computing refers to the libraries' data center for access services to machine readable data files.

33 GUELPH, UNIVERSITY OF CD-ROM Catalog operating system, library access, 15 PC workstations/SONY CD readers. Bibliographic instruction, operating system, standalone access, microcomputer workstations. Software is VITAL (Videotext in Teaching and Learning) available for purchase by other libraries.

35 HAWAII, UNIVERSITY OF ALI'L is Advanced Library & Information, Inc.

37 HOWARD UNIVERSITY Local system: Series 1 minicomputers networked to PCs.

39 INDIANA UNIVERSITY Indiana University is a former customer of the Biblio-Techniques online catalog software vendor. In cooperation with several other former Biblio-Techniques customer institutions, Indiana University has arranged to license WLN software and to continue to use the BLIS software without vendor support. This WLN-BLIS-local system should be installed and tested, and an initial OCLC archive tape-based database should be loaded during 1987-88. Authority control, local cataloging, catalog management and online public access are included in the system to be implemented first. Future integration of circulation, acquisitions and serials control capabilities is expected.

Recently the Indiana University Libraries have begun offering electronic reference, materials delivery and interlibrary loan services through the Library Information and Reference Network

(LIRN), which is accessed via the IU Bloomington reserve list processing and circulation renewal services, as well as direct searching access to the OCLC database will also be available on LIRN.

40 IOWA, UNIVERSITY OF Two pilot sites, the law library and the health sciences library, are expected to have operational online catalogs, with local cataloging and authority control in 1987/88.

41 IOWA STATE UNIVERSITY Serials/Union List-Local IBM4381. Circulation and Reserve Room use Local IBM 5030/4381. Public Computing uses NAS9160/VAX Network. Reference uses Local NAS9160.

42 JOHNS HOPKINS UNIVERSITY-MSE LIBRARY Some Cataloging work also being done on NOTIS using 2.5 workstations. Database Searching uses Silver Platter with 1 workstation. Interlibrary Loan uses OCLC ILL with 2 workstations. Database Conversion also uses 1 RLIN workstation

43 KANSAS, UNIVERSITY OF Locally developed on-line catalog, with 63 public access terminals to be operational October 1987. Two additional OCLC terminals, July 1987.

44 KENT STATE UNIVERSITY Online public access catalog using NOTIS was implemented June 15, 1987. Circulation is scheduled for online operation by January 1, 1988. Serials and Acquisition subsystems on NOTIS are to be implemented in 1988.

Workstations for administrative functions include microcomputers in all administrative offices (Director, Assistant/Associate Directors, and Department Heads). All of these microcomputers also function as NOTIS terminals.

Workstations for 'Public Access' include 25 microcomputers in Computer-Assisted Instruction (CAI) in the Main Library and five microcomputers in the Reference Center which also function as public NOTIS terminals. The CAI microcomputers are used both for access to CAI programs and as stand-alone microcomputers.

In the 'Ownership/Leasing' category, 'shared computer' was used both for NOTIS functions (we are in a shared operating environment with our Computer Services) and other external functions (e.g. OCLC or online vendor searching). There areas with stand-alone microcomputers ('Public Computing,' 'Administrative', ' and 'Reference') are indicated as being 'dedicated' computers'.

45 KENTUCKY, UNIVERSITY OF Bibliographic Instruction is operating a dedicated local system in the library a using local area network with 128 PRIME workstations.

46 LAVAL UNIVERSITY Administrative uses a subroutine of a book-keeping program developed in-house for the Department of Finance. No particular acronym.

48 MCGILL UNIVERSITY The online catalog has gone operational with 140 workstations -- 79 in public areas and 61 in staff areas -- since Sorted Listings were printed in this inventory. Dial-up access to online catalog is planned for 1987-88. The COM Catalog will be used as a backup to the online catalog in 1987. Then, the library will gradually stop producing COM during 1988.

49 MCMASTER UNIVERSITY Separate systems of the Health Sciences Library have not been included. The main library will also be participating in the University's trial of a comprehensive administrative system - PROFS.

50 MANITOBA, UNIVERSITY OF Our datamedia XL dumb terminals are all wired to the campus mainframe (Amdahl). The mainframe has Datapac/Tymnet/etc. connections. We use any library terminal to go through the Amdahl, select utilities in California, Chicago, Bethesda, Ottawa, etc, run a search and then save the interaction and results in a mainframe dataset. We then (a) print on a high-speed laser (b) massage the data into specialized formats for print/storage (c) give the client access to the dataset to use as he wishes.

51 MARYLAND, UNIVERSITY OF Figures are for the College Park campus only. The Geac system is a shared system with 4 other libraries of the Univ. of Maryland. The Geac terminals/workstations serve multiple functions. The number of workstations include Geac, OCLC and microcomputer workstations which support the functions listed. Some are dedicated terminals, some have multiple uses, some are stand-alone workstations for use with available software, CD-ROM or videodisc databases. Administrative includes a Geac word processing system, a Vax LAN to be installed FY 88, and staff microcomputer workstations.

52 MASSACHUSETTS, UNIVERSITY OF Circulation and Online Catalog are operating in 1 branch library, but are in a lengthy process (several more years) of being implemented in Main.

53 MASSACHUSETTS INSTITUTE OF TECHNOLOGY We are planning to upgrade our Geac system in 1988 to the concept 9000. We are planning to test the ABLE microcomputer-based bindery system. We also produce a Serials Commitment List on a campus IBM mainframe and hope to convert the system this year to an IBM-AT.

56 MICHIGAN STATE UNIVERSITY In the process of implementing NOTIS; project all modules operational by 9/89. Present CLSI system with over 1.4 million records available as public host on campus LAN. INFOTRAC, several CD-ROM services available for end-user searching. STAR system (Cuadra) in use for support of locally created specialized databases. Locally developed microcomputer applications for record keeping, data analysis, statement and/or report productions for database searching, student payroll and interlibrary loan; remote bulletin board system (RBBS) for receiving some types of user requests; working on development

of a staff support application for basic science reference using an artificial intelligence shell. Archives uses, markets locally developed microcomputer software to support creation, maintenance and searching of records in USMARC format.

58 MISSOURI, UNIVERSITY OF The three workstaticn for ILL refer to Ellis, Health Sciences, and Law; each still has only one workstation. We run a 'circ' terminal in the Bindery.

63 NORTH CAROLINA STATE UNIVERSITY TRLN = Triangle Research Library Network.

66 OHIO STATE UNIVERSITY Bindery System - Goldbacs system from the vendor.

70 PENNSYLVANIA, UNIVERSITY OF Penn currently has a growing number of CD-ROM databases installed in the main library, and at the business school and biomedical libraries.

Penn has BRS/Search installed on the library's mainframe for use with locally held databases. We will have ABI-Inform and Medline (as well as others) available by the Fall 1987 term.

71 PENNSYLVANIA STATE UNIVERSITY Campus-wide, in the Penn State context, indicates that system is or will be available at any authorized terminal at the main campus libraries as well as at the distributed campuses around the state. Patrons have selective access to information about the circulation status of library materials and about their own borrowing status. All authorized staff terminals have access to Penn State's Faxon/LINX database. All LIAS terminals, both public and staff, have access to the bibliographic and holdings information for serials in the collection. All authorized staff LIAS terminals have access through switch to any authorized external database, including OCLC, RLIN, commercial services, etc. Libraries are currently implementing public access microcomputer laboratories at several locations.

72 PITTSBURGH, UNIVERSITY OF Film booking is operational using 4 locally developed system based on MARC record includes media item, equipment, operator, classroom, etc. East Asian Cataloging is operational using 2 OCLC workstations. Database conversion uses 2 Pittsburgh Regional Library Center systems; our local area network.

74 PURDUE UNIVERSITY Online catalog services are provided by three separate, but overlapping, locally developed systems.

76 RICE UNIVERSITY Administrative computing vendor is PCs Limited (produce IBM clones) using WordPerfect 4.2.

78 RUTGERS UNIVERSITY Local MARC database maintenance activities have been included under the cataloging/local section. Stand alone CD ROM database work stations have been included under the database searching section. The Geac public access mode

of the circulation subsystem is being heavily used as an online system while planning continues for a full online catalog.

81 SOUTHERN CALIFORNIA, UNIVERSITY OF Inhouse IBM3481 running BRS software for end-user searching of locally stored databases. For pubic computer workstations to the library supports five computer labs concentrating on access to library services. These are located in or near dorms. Database searching activities include purchase and local loading of IAC databases as well as subsidized searching via Dialog and BRS by reference librarians.

83 STANFORD UNIVERSITY Report summarizes status of automation among five independently administered libraries. Serials union list shared via tape to Univ. of California's MELVYL. Circulation module (plus local OPAC) for Medical Library expected during 1987/88. Reserve room system produces microfiche output -- students have no online access. Public computing includes student/faculty access to micro, mini, and mainframe computers. Administrative includes library use of micro software (e.g., Lotus) plus access to shared systems.

84 SUNY, UNIVERSITY AT ALBANY UNISYS refers to UNISYS 'MAPPER' system used for accounting. PC refers to WANG PCs used for word processing, and IBM and Zenith PCs used for word processing, Lotus, Dbase.

85 SUNY, UNIVERSITY AT BUFFALO Public Computer workstations are WANG word processing PC terminals on university network. Reference uses Disclosure/ERIC, CD ROM, mini medline.

86 SUNY, UNIVERSITY AT STONY BROOK It is hoped to conclude a contract and begin implementation of NOTIS during FY 1987-88.

87 SYRACUSE UNIVERSITY SULIRS is the Syracuse University Library Information System.

88 TEMPLE UNIVERSITY Include law, medical, and dental/allied health libraries.

90 TEXAS, UNIVERSITY OF 65 terminals in library and dial-up access and hard wired to all terminals on campus.

91 TEXAS A&M UNIVERSITY The Sterling C. Evans Library will be converting from ALIS II to NOTIS in 1987/88.

92 TORONTO, UNIVERSITY OF Authority Control done on the same terminals as Cataloging; so the 19 work stations mentioned are the same 19 as those listed under cataloging. The 70 terminals mentioned for online catalog are the same 70 mentioned for Serials/Union List.

93 TULANE UNIVERSITY ALIS II software is currently installed and operational in the main library and branches. NOTIS is being

installed for all libraries, except Law, on a shared IBM 3081 KX.

95 VANDERBILT UNIVERSITY Reference consists of 11 CD-ROM workstations. Administrative: almost all offices are using microcomputers for word processing and spreadsheets more than 40 in all; some are also used as terminals for other purposes.

97 VIRGINIA POLYTECHNIC INST. AND STATE UNIV. Database Conversion uses VTLS, DB General and VSOFT. A system status designation of 'Being Planned, Purchased, Testing' should in all cases be interpreted as meaning the function is at an early testing stage. Subsequent modification may be required. The University Libraries have inhouse a Hewlett Packard 300/70 computer (scheduled to be upgraded within the academic year to an HP950) and distributed terminals and microcomputer workstations. Most workstations in office areas access mainframe computers housed in the University's computer center via the University's local area network (LAN), as well as the Libraries' internal system. In addition, via BITNET and other communications links, the libraries have multi-institutional access, which is of course reciprocal.

102 WAYNE STATE UNIVERSITY Number of workstations in Acquisitions and Serials Check/List includes staff workstations in 4 library branches plus all T.S. Terminals. Online catalog workstations include only terminals dedicated to the PAC. The PAC is also accessible on all comapus terminals accessing the mainframe and by dial access. Database searching terminals include terminals attached to optical disk readers and those primarily used for database searching. Public computing terminals include only library-owned workstation. A computer Services Center facility is housed in a library building, but is staffed by the CSC. A exact number of workstations for Retrospective Conversion is not possible to compute; all available OCLC and IBM PCs are used up to 40 at a time. We have received 3 terminals on loan from OCLC for the project.

104 WISCONSIN, UNIVERSITY OF We are integrating NOTIS with the Network Library System (NLS), the locally developed online catalog and authority processing system.

105 YALE UNIVERSITY For acquisitions, response is for Machine Aided Technical Processing System (MATPS), which services main library plus certain school and department libraries. For circulation and reserve room, both functions are performed by Geac circulation control system. The count of 37 workstations is the total for the entire Geac system, with no distinction drawn between units used for circulation and course reserves. For cataloging/utility, collection development and ILL, all three are done primarily on RLIN. The count of 38 workstations is the total for our use of RLIN, including both video display terminals and microcomputers, with no distinction drawn between units used for cataloging, collection development, and ILL. For serials check-in/claim, responses are for the main library. The Law Library also runs its own computer-based serials operation, using the same INNOVACQ

system. Regarding public computer workstations, we have a mix of terminals through which public access is provided to mainframe computing at Yale Computer Center and of microcomputers (IBM/ATs and Apple Macintoshes) which function each as an independent unit. All of these units are placed in the libraries by other organizations. For administrative, included are all varieties of word processing, database applications, spreadsheet applications, and a heterogeneous remainder of other computer applications.

106 YORK UNIVERSITY Implementation of NOTIS for all functions being planned with over 200 terminals and PCs and a bibliographic data base of close to 1 million records. Online catalog/cataloging to be operational in 1988. Data Base Searching includes access to PyscLit on CD-ROM; additional CD-ROM stations planned. Serials/Union List Com. Cat. produced inhouse from bibliographic data created on UTLAS. Authority Control utilized UTLAS and inhouse development. Administrative uses IBM PCs and campus IBM; PROFS for electronic mail.

112 NATIONAL AGRICULTURAL LIBRARY NAL is still anticipating installation of VTLS later in 1987.

113 NATIONAL LIBRARY OF CANADA Acquisitions now covers purchasing and book fund accounting; Legal Deposit operations are currently being tested. DOBIS system used by NLC is Canadian Federal Government version, not IBM's. Cataloging/Utility includes a) Use of NLC DOBIS by other libraries (171 remote dedicated workstations); b) use by NLC of other utilities (UTLAS, OCLC, RLIN, etc.) (3 dedicated workstations, numerous undedicated. Cataloging/Local includes use of DOBIS by NLC for the following: a) bibliographic cataloging, b) authority control, c) pre-order searching, d) input and maintenance of NLC's Union Catalog of Books and Union Catalog of Materials for the Handicapped. COM Catalog is only a backup to on-line catalog access via DOBIS. On-Line Catalog function is available from any DOBIS terminal. Workstation count here covers only terminals in public service areas. Database Searching facilitates access to 26 systems and some 400 databases. Administrative includes electronic mail, word processing, financial, and personnel systems. Reference uses IBM PC with Lotus 123 and INMAGIC. Collection Development covers NLC developed Canadian Conspectus.

114 NATIONAL LIBRARY OF MEDICINE Database Conversion is operational for prints and photographic records. The number of workstations refers to inhouse workstations, not the thousands of workstations which access MEDLINE, etc., and DOCLINE from various remote sites. The number used for maintenance of subject authorities; all workstations used for cataloging are also used to establish name authorities.

115 NEWBERRY LIBRARY Online catalog operational, public access terminals not yet installed.

ADDITIONAL RESOURCES ON AUTOMATION

SPEC KITS (SYSTEMS AND PROCEDURES EXCHANGE CENTER):

Optical Discs for Storage/Access	(#133, April 1987)
Retrospective Conversion	(#130, January 1987)
Systems Office Organization	(#128, October 1986)
Automated Library Systems	(#126, July-August 1986)
Technical Services Cost Studies	(#125, June 1986)
Barcoding of Collections	(#124, May 1986)
Microcomputer Software Policies	(#123, April 1986)
End User Searching Services	(#122, March 1986)
Bibliographic Instruction	(#121, February 1986)

SPEC Kits are available mainly by subscription. Individual issues cost $20.00 ($10.00/ARL members), with prepayment required. Order by title and number from: SPEC/Office of Management Studies, Association of Research Libraries, 1527 New Hampshire Ave., N.W., Washington, D.C. 20036. Outside the U.S., add $5.00 per order.

BACK ISSUES OF AUTOMATION INVENTORY

BACK ISSUES of the 1985 and 1986 Automation Inventory are available for $40.00 each. See ordering information above. The 1985 Inventory is Publication PB07. The 1986 Inventory is Publication PB10.

SEARCHES

Information in the Automation Inventory database is constantly updated. The database is maintained inhouse using REFLEX software, which is transportable to many spreadsheet formats, including LOTUS. Floppy disks for the MS/DOS environment are available for $25.00. Assistance in using the database is available for an hourly consulting fee. Searches of the database also are available at the following fee schedule:

	ARL LIBRARIES	NON-ARL LIBRARIES
MINIMUM CHARGE	$20.00	$40.00
COMPLEX SEARCHES	$25.00-$100.00	$50.00-$200.00
